

Draft overview changing WebGUI site from **this.website.net** into **old.website.net**

Aim: Rename website in order to retire **this.website.net** whilst keeping it accesible if required as **old.website.net**

Create and make available a new **this.website.net**.

Steps foreseen:

0) Create/Verify Backup => Operation is delicate

1) Stop spectre, mod_proxy and mod_perl.

2)

3) In /data/domains rename folder this.website.net to old.website.net

4)

5) In /data/WebGUI/etc rename this.website.net.conf to old.website.net.conf

6) In file /data/WebGUI/etc/old.website.net.conf change value of key "uploadsPath" to "/data/domains/old.website.net/public/uploads"

7) In file /data/WebGUI/etc/old.website.net.conf change value of key "sitename" to "old.website.net"

8) In file /data/WebGUI/etc/old.website.net.conf change alue of key "dsn" to

"DBI:mysql:old_website_net;host=localhost;port=3306"

9) In /data/wre/etc/ rename file this.website.net.modproxy to old.website.net.modproxy

10) In /data/wre/etc/old.website.net.modproxy change all references to this.website.net to old.website.net

11)

12) In /data/wre/etc/ rename file this.website.net.modperl to old.website.net.modperl

13) In /data/wre/etc/old.website.net.modperl change all references to this.website.net to old.website.net

14) In /data/wre/etc/ rename file awstats.this.website.conf to awstats.old.website.net.conf

15) In /data/wre/etc awstats.old.website.net.conf change all references to this.website.conf to old.website.conf

16)

17) In /data/wre/var/mysqldata renamefolder this_website_net to old_website_net

18) Ensure DNS knows about old.website.net

19) Start MySQL

20) Login as root

21) Open old.website.net.conf and retrieve values for key dbuser and dbpass

22) Add user dbuser with dbpass to database **old.website.net**

23) Assign all rights except grant for dbuser with dbpass to database **old.website.net**

24) Start mod_perl, mod_proxy

25) Start wreconsole.pl; check **old.website.net** (Refresh browser if **old.website.net** is not presented and **this.website.net** is visible)

26) Start SPECTRE

27) Add site **this.website.net** in wreconsole

28) Restart webservers and SPECTRE, et voila.
